Update standardisation exercises

ICEG Person

Valy Van den Broeck

ICEG Person

- Preliminary trajectory launched in 2024: initial scope agreed at ICEG level (identifiers, names, life events, legal events) and political alignment secured with the National Register and CBSS/KSZ as authoritative registries.
- First modelling challenges already identified in 2024 (Address model, generic vocabulary, separation between registry operations and person data) and reusable building blocks published on belgif (OpenAPI Person specs).
- Trajectory restarted with a kick-off meeting on 11/05/2026, bringing federal and regional administrations back around the table (BOSA, DV, BCED, SPW Digital, KSZ-BCSS, SMALS, Paradigm, IBZ).
- Charter & Scope document refreshed and for review by the core team.
- Governance and working method confirmed: iterative and consensus-based, with a U-1 decision rule (unanimity minus one) to prevent deadlock.
- Working structure agreed: core team of one representative per administration, supported by a wider community group, with all outputs published openly on GitHub / belgif.
- Delivery plan set: one Business Workshop followed by four Thematic Workshops, leading to a first iteration (v1) of the Person model by December 2026.
- Open scoping questions surfaced for use-case analysis: scope breadth (NR information types, ID cards, work permits), historical data, cross-domain attributes, Person↔Organisation relations, authentic source per concept, foreign / EU registrations.

ICEG Person

Next steps:

- Each participating organisation to confirm its core-team representative.
- Core-team preparation meeting on 21/05/2026 to align on use cases and confirm workshop dates with each administration.
- Business Workshop (June 2026) to identify and prioritise use cases, mapping person-related data flows in and out of each organisation.
- Building incrementally towards v1 of the Person model in December 2026.
- Consolidate the 2024 outputs (initial scope, identified modelling issues, existing OpenAPI Person specs) as direct input to v1 rather than starting from scratch.
- Resolve the scoping questions raised at kick-off: information types in scope, treatment of historical data (real-world history vs. registration audit trail), cross-domain attributes (e.g. administrative vs. biological gender), Person ↔ Organisation relations, authentic source per concept, foreign / EU registrations and KSZ link register.
- Define concepts, attributes, cardinality, data types and relations of the data model, and produce concrete data examples for the prioritised use cases.

ICEG Hydrants

Alexander Potlout

ICEG Hydrants

Update 2026

- 43 change requests have been tackled based on feedback from Working Group on 28/03/2024. Full list of change requests and outcomes can be found [here](#). Updated model (v12) can be found [here](#).

Ongoing

- Draft publication with OSLO Toolchain 4 and draft publication on BELGIF.

To Do

- Organise additional workshop and closing webinar

ICEG BeStAdd

Alexander Potlout

ICEG BeStAdd

Update 2026

- The BeSt Add model was updated to enable successful processing via OSLO Toolchain 4.
- Technical adjustments included:
 - Model naming
 - Codelist modelling (class with attributes changed to enumeration)
 - Missing URIs for relations (placeholders added)
 - URI notation corrections (HTML entities were deleted, such as '<' and '>')
- No changes were made to the semantic content of the model (definitions, cardinalities, usage notes, relations, etc. were not changed).

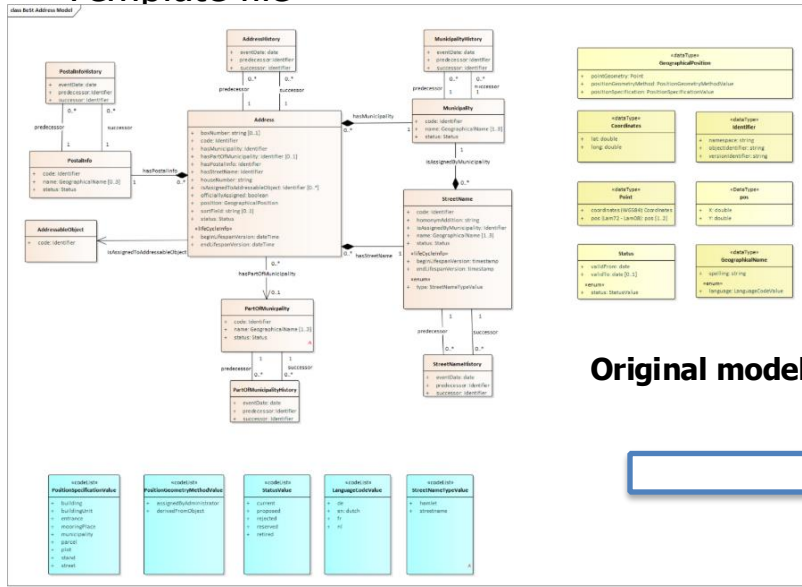

To Do

- Organise a workshop session with BOSA to support the split between application profile and implementation model
- Provide a list of elements with missing URIs for further completion

Updated model

Update exercise translation data standards

Eveline Vlassenroot

Objective & approach

- Objective: translate 135 recognized standards and 35 candidate standards into English, French and German
- Publication: ICEG Github and Belgif website
- Budget: 50% of total ICEG allocation

Approach

Precondition: start only once standards are available published via Toolchain v4

Approach:

- Compile list of v4 standards
- Share with Review Comite
- Select priority standards for first translation wave

Two tracks: Translation & publication

Translation

- Translate OSLO Standards (approach in waves)
- Publish via instance of OSLO Toolchain v4 on ICEG GitHub
- Collaboration with Bart H and team OSLO

Publication

- Enhance Belgif portal for discoverability
- Publish semantic models, vocabularies and their documentation
- Improve UX (start with basic version)
