Maximizing the reuse of Open Transport Data

Pieter Colpaert
Ghent University – imec – Open Knowledge Belgium

How far
do you live from work?

km or min?

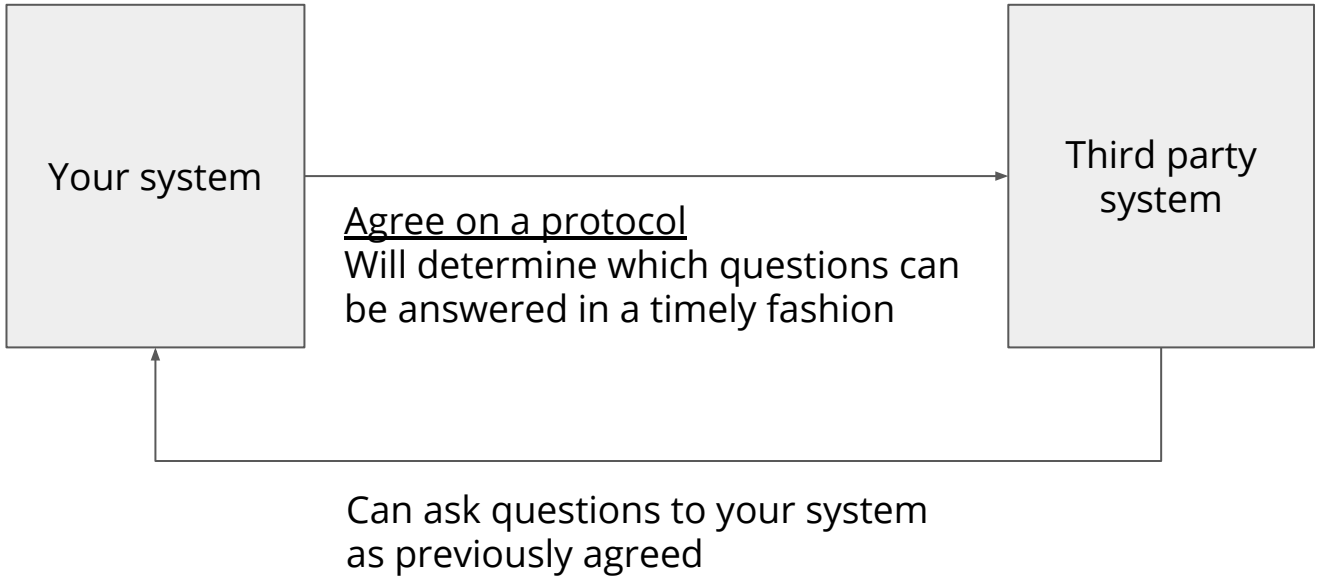

Imagine a program calculating distance in minutes
What data would you need?

Transport has become a data sharing problem

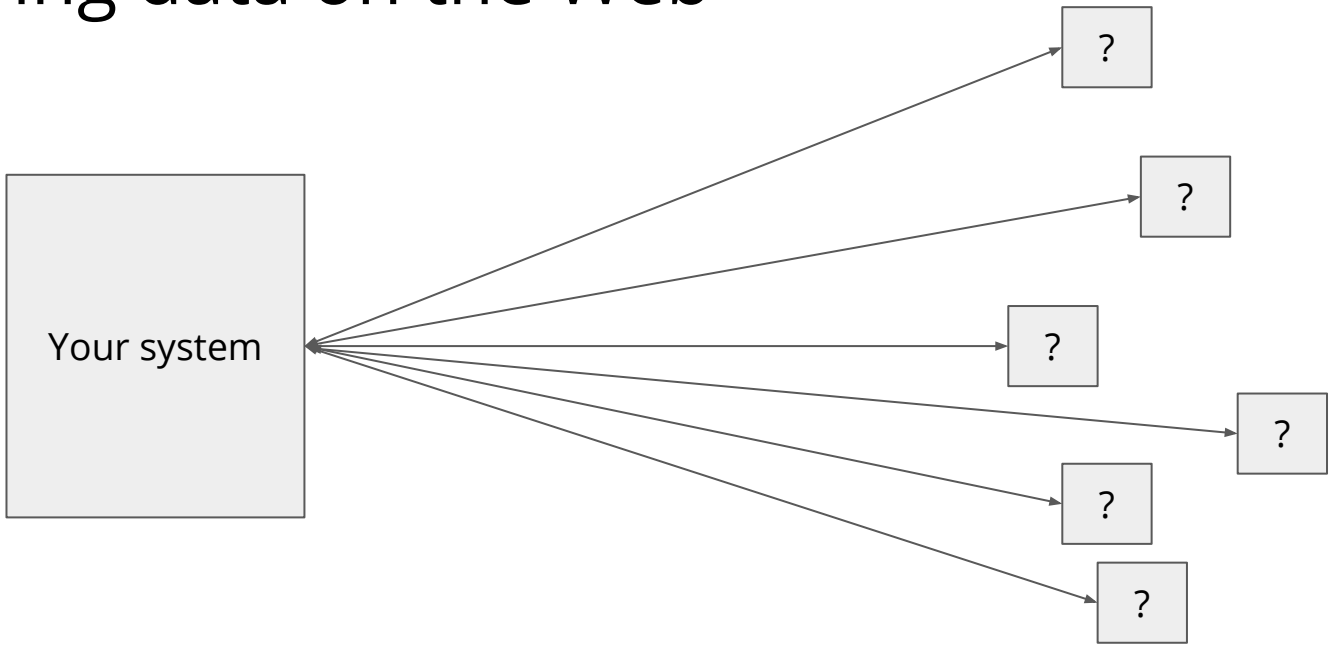

How can we fix it?

				
Schedules	Contract 3★ dump	API keys 3★ dump	Contract 3★ dump	Open License 3★ dump
Real-time	Contract 3★ dumps	API keys 3★ dump	API keys beta-version	no
Historic	no	no	no	no

Sharing data between client & server

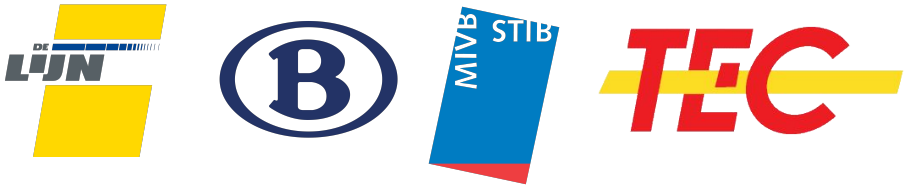

Sharing data on the Web

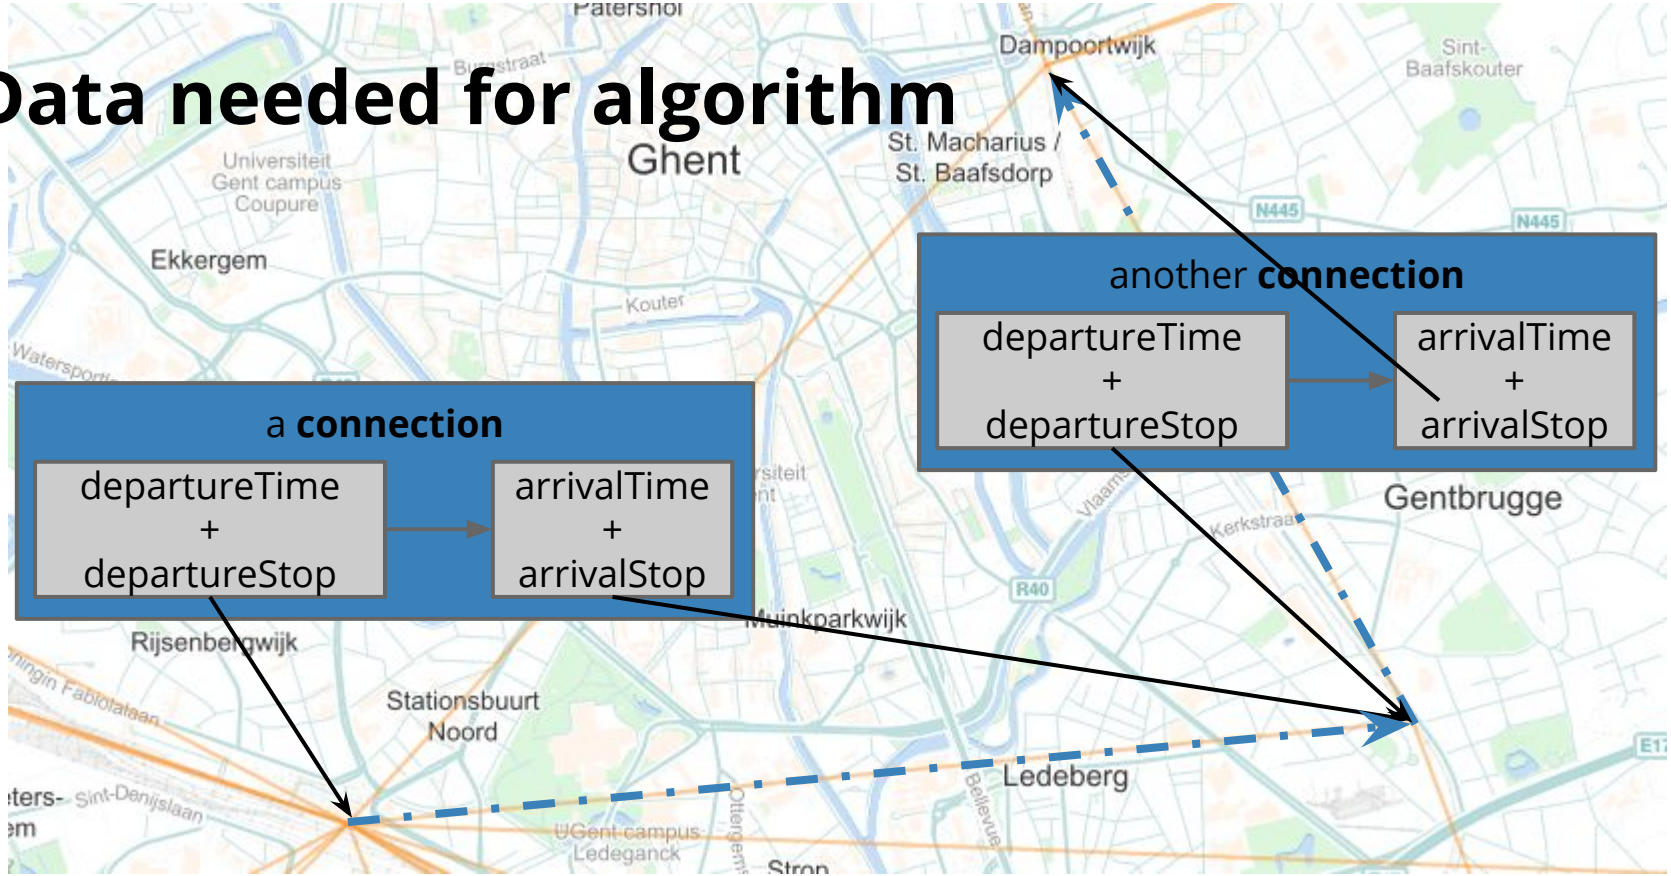

Mission: Automating the reuse process

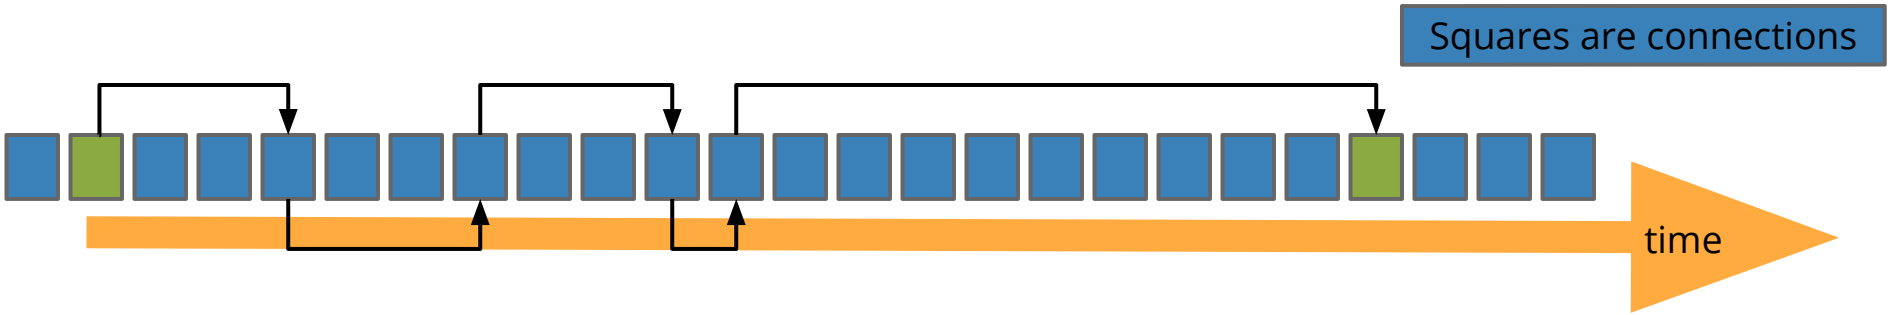

Can we find a way to publish public transport data as **base registries**?

Data needed for algorithm

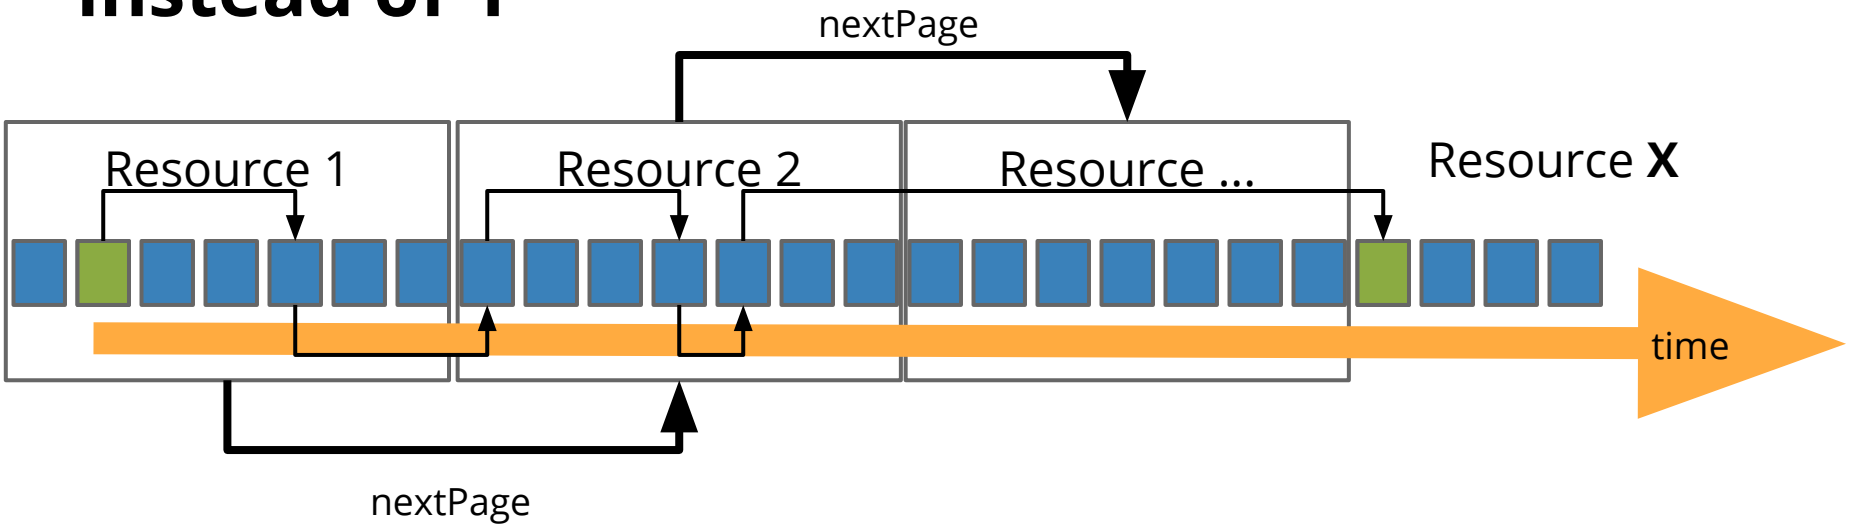

And this is the algorithm*

~ creating a minimum spanning tree through a sorted directed acyclic graph

* The Connection Scan Algorithm (CSA)

When published in pages on the Web, route planning will need X requests instead of 1

NEW
Now with: RT, historic and planned data for SNCB

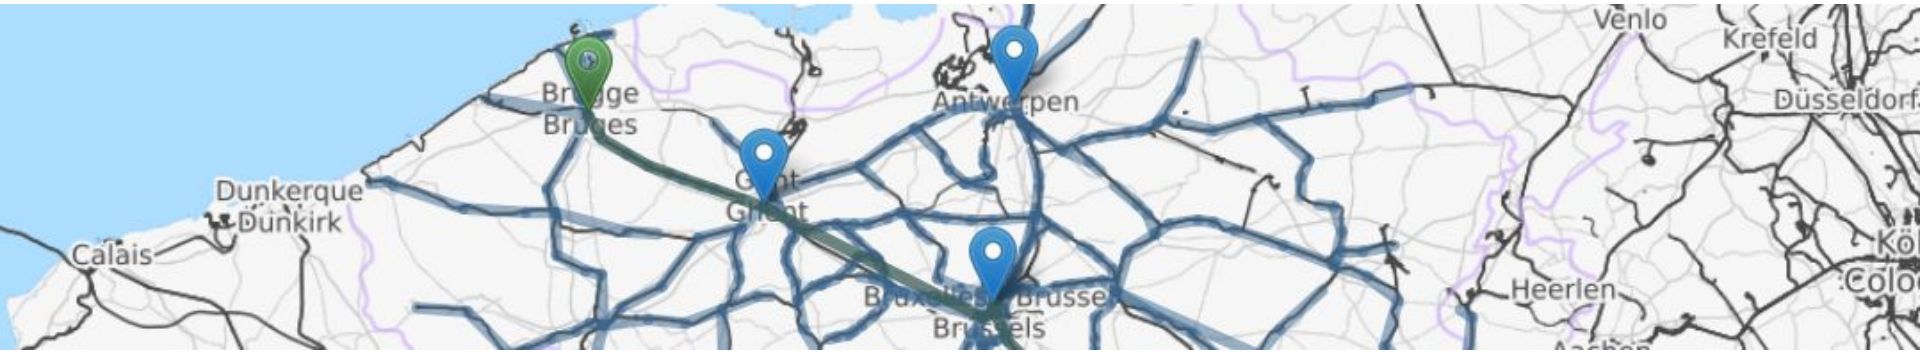

Developer?

Try it yourself at

http://LinkedConnections.org

No registration!

Automate the integration of future datasets!

A world where knowledge creates power for the many, not the few
